Get Onboard with Data Backup

There is no way around it: A modern business needs to back up their data separate from their primary system. While many companies utilize the cloud for storage, they don't realize it isn't enough. Between hardware failures and the rising rate of cybercrime, if you aren't actively backing up your systems in multiple locations, you're putting your entire company at risk of being one of the 60 percent of small companies that Deloitte reports will go out of business within six months of a data breach or cyberattack.

We're Here to Help

With data backup solutions from CMIT, you can stay focused on your business while we handle your recovery plans. Our team has decades of combined premier IT experience to ensure your data is recoverable, even if one or more storage locations become inaccessible. Call now and have your tech transformed with the expertise of CMIT.
